

GPA Rolling Classification

We at GPA are developing a rolling classification for calculating shooter classifications. It is based on a MATCH not just one stage. Our software pulls the data from each GPA match and (as long as you have a member number) calculates your percentage off of a match PAR time. The rolling calculation uses 5 of your most recent matches to classify you.

Our classifications are as follows (with comparables to other sports)

Double Platinum = GM or DM

Platinum = MA

Gold = A or EX

Silver = B or SS

Bronze = C or MM

Pew Pewter = D or NV

We have an initial classifier that is listed previously in the classification section, and it will count toward the Rolling Classification.

Handicap

The classification system in development will allow us to calculate a handicap for each shooter to be used for TEAM scoring if shooters choose to form teams. It WILL NOT affect individual scoring. You will have to have 5 matches scored to have a handicap calculated.

With this, ANY 4 members could compete against any other 4 members and have a chance to win a team category.
